ł	The MAILING DATE of this communication app					
	Period for Reply					
	A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

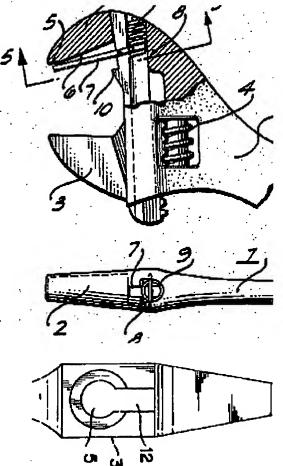

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by either McComb (2,630,037) or Kitt, Jr. (6,116,121).

Either McComb or Kitt, Jr., discloses all of the limitations of claim 1, i.e., an adjustable spanner, comprising a main body having an end formed with a drive portion formed with A fixed jaw (2 or 3 Kitt) and a slideway, an adjustment screw (4 or 9 Kitt) rotatably mounted in the main body, and a movable jaw (3 or 7 Kitt) movably mounted on the drive portion and having a bottom formed with a rack slidably mounted in the slideway of the drive portion and engaged with the adjustment screw, wherein the drive portion has a first side and a second side; the second side of the drive portion is formed with an inclined face inclined toward the first side of the drive portion, so that an included angle is defined between the inclined face of the second side of the drive portion and the first side of the drive portion.

Wherein the inclined face of the second side of the drive portion is extended upward from a horizontal extension of a bottom of an included angle of the fixed jaw (angle formed at an

Application/Control Number: 10/689,929

Art Unit: 3723

extension from upper apex), so that the second side of the drive portion is inclined relative to the first side of the drive portion.

Wherein the inclined face of the second side of the drive portion is extended upward from a horizontal extension of a bottom of the rack (e.g., plane tangent to the lower apex or a plane extending from the bottom of the rack, Kitt) so that the second side of the drive portion is inclined relative to the first side of the drive portion.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jackson (2,688,893) in view of either Leitner (1,261,565) or Schlehr (1,393,399).

Jackson meets all of the limitations of the claim 1, except for inclined second face. Leitner and Schlehr each teaches spanners having inclined second face. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the invention of Jackson with the inclined second face as taught by either Leitner or Schlehr to adapt the tool for use in close places.

Regarding claims 2, 4 and 5, Jackson in view of either Leitner or Schlehr, meets the limitations as recited, however, it is noted that specific arrangement of element, e.g., starting point of the inclined surface for the different embodiment disclosed (even though teaching references together disclose both), would be further modification well within the knowledge of one of ordinary skill in the art with respect to workpiece and/or operational parameters.

Application/Control Number: 10/689,929

Art Unit: 3723

Regarding claim 3, Jackson in view of either Leitner or Schlehr, meets all of the limitations except for the disclosed range for the angle, however, further modifying the tool of prior art with respect to specific angle, e.g., 15 degrees, would be within the knowledge of one of ordinary skill in the art with respect to workpiece and/or operational parameters.

### Conclusion

- 5. Prior art made of record and not relied upon are considered pertinent to applicant's disclosure. Colvin, Meier et al., Rosenbloom and Hsien are cited to show related inventions.
- Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Hadi Shakeri at (703) 308-6279, FAX (703) 746-3279 for unofficial documents. The examiner can normally be reached on Monday-Thursday, 7:30 AM to 6:00 PM. All official documents may be faxed to (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist at (703) 308-1148.
